This workshop described a classroom development project that provides a fully inclusive and accessible environment for all students including students with disabilities. Science curriculum has many highly visual and interactive components that have traditionally created barriers to the full participation of disabled students. New technologies have emerged in the teaching of biology in lecture and lab that can assist in creating learning spaces that will enhance student-teacher and student-student interaction and support multiple modes of learning. We described a number of accommodation strategies that we have developed over the last ten years to enhance learning for all disability groups focusing on the use of technology as a means to accommodate individual learning challenges.

**Keywords:** accessible laboratory, laboratory accommodation

**Mission, Review Process & Disclaimer**

The Association for Biology Laboratory Education (ABLE) was founded in 1979 to promote information exchange among university and college educators actively concerned with teaching biology in a laboratory setting. The focus of ABLE is to improve the undergraduate biology laboratory experience by promoting the development and dissemination of interesting, innovative, and reliable laboratory exercises. For more information about ABLE, please visit [http://www.ableweb.org/](http://www.ableweb.org/).

Papers published in *Tested Studies for Laboratory Teaching: Peer-Reviewed Proceedings of the Conference of the Association for Biology Laboratory Education* are evaluated and selected by a committee prior to presentation at the conference, peer-reviewed by participants at the conference, and edited by members of the ABLE Editorial Board.
