Non-Visual Laboratory Activities for Biology

Deborah Fiore

Bridgewater State University, Department Biological Science, 131 Summer St, MA 02325 USA (dfiore@bridgew.edu)

The discipline of biology is extremely visual; it relies on a person’s ability to observe and study the world around them. It is a challenge to teach the concepts of biology to individuals in a laboratory setting who are unable to use their sense of sight. Non-sight required lab activities were pursued and implemented for visually impaired student in the non major’s General Principles of Biology Laboratory Course to address concerns that the sight-required laboratory activities were not optimal for the visually impaired and may be diminishing their overall lab experience. This session will introduce and demonstrate some of the non-visual biology laboratory activities that were developed and are currently being used in the Non Majors General Principles of Biology Laboratory Course at Bridgewater State University.

Mission, Review Process & Disclaimer

The Association for Biology Laboratory Education (ABLE) was founded in 1979 to promote information exchange among university and college educators actively concerned with teaching biology in a laboratory setting. The focus of ABLE is to improve the undergraduate biology laboratory experience by promoting the development and dissemination of interesting, innovative, and reliable laboratory exercises. For more information about ABLE, please visit http://www.ableweb.org/.

Papers published in Tested Studies for Laboratory Teaching: Peer-Reviewed Proceedings of the Conference of the Association for Biology Laboratory Education are evaluated and selected by a committee prior to presentation at the conference, peer-reviewed by participants at the conference, and edited by members of the ABLE Editorial Board.
