(ngk@ucalgary.ca)

Some concepts in enzymology can be difficult for students, in part because a deep understanding requires some mathematical sophistication. In many cases, a deeper appreciation of both basic and advanced concepts can be gained by providing intuitive simulations of the dynamic processes occurring in enzyme systems. I described the development and application of interactive software intended to provide students with a more intuitive feel for concepts in enzymology.

Mission, Review Process & Disclaimer

The Association for Biology Laboratory Education (ABLE) was founded in 1979 to promote information exchange among university and college educators actively concerned with teaching biology in a laboratory setting. The focus of ABLE is to improve the undergraduate biology laboratory experience by promoting the development and dissemination of interesting, innovative, and reliable laboratory exercises. For more information about ABLE, please visit <http://www.ableweb.org/>.

Papers published in *Tested Studies for Laboratory Teaching: Peer-Reviewed Proceedings of the Conference of the Association for Biology Laboratory Education* are evaluated and selected by a committee prior to presentation at the conference, peer-reviewed by participants at the conference, and edited by members of the ABLE Editorial Board.
