Understanding Marine and Aquatic Ecology in Biology Labs in a Microcosm: An Alternative Integration to the Curriculum

Carrington Conerly¹ and Elton Nguyen

¹The Ohio State University, Center for Life Sciences Education, 1735 Neil Ave., Rm 260, Columbus OH 43210 USA
(conerly.2@osu.edu)

With coral reefs declining and fauna in urban environments overlooked, it is more important than ever to ignite interest in these habitats to foster a new generation of conservationists. The purpose of this workshop is to demonstrate a method to expose students to aquatic ecological processes and biological diversity in habitats around the world through the use of established freshwater and marine microcosms. During this session, participants will learn about the creation of the microcosm room itself, including both the mechanics of how it was done along with tips and tricks we learned along the way. Then, participants will have the chance to experience the microcosms firsthand. Throughout the entire session, we will be providing details about how you can set up your own microcosms in a teaching laboratory.

Keywords: microcosm, biological diversity, aquatic ecology

Mission, Review Process & Disclaimer

The Association for Biology Laboratory Education (ABLE) was founded in 1979 to promote information exchange among university and college educators actively concerned with teaching biology in a laboratory setting. The focus of ABLE is to improve the undergraduate biology laboratory experience by promoting the development and dissemination of interesting, innovative, and reliable laboratory exercises. For more information about ABLE, please visit http://www.ableweb.org/.

Papers published in Tested Studies for Laboratory Teaching: Peer-Reviewed Proceedings of the Conference of the Association for Biology Laboratory Education are evaluated and selected by a committee prior to presentation at the conference, peer-reviewed by participants at the conference, and edited by members of the ABLE Editorial Board.
