# Learning from the Trees: Incorporating Project Budburst in an Introductory Biology Laboratory Deborah A. Lichti<sup>\*1</sup> and Kristine Callis-Duehl<sup>1</sup> 1. Department of Biology, East Carolina University, Greenville, NC USA

Introductory Lab (Pre-CUREs)

• All freshmen biology majors take these courses and gain fundmental skills for course-based undergraduate research experience (CURE) courses • Ecology is not required for all biology majors at East Carolina University

• 85% of students want to attend medical school **Research Experience Importance: Problem:** Undergraduates benefit from research experiences, but lack the skills (quantitative & communication) necessary to properly engage in research

Solution: Engage students early in pre-CURES or mini-CURES using large data research projects such as citizen science projects

# **Citizen Science Pre-CURE Course** Vision and Change Core Competencies:

- Ability to apply the process of science
- Ability to use quanitative reasoning
- Ability to communicate and collaborate with other disciplines
- Ability to understand the relationship between science and society

#### **Learning Objectives:**

1) Design an experiment to test a hypothesis by collecting data from the nature environment 2) Analyzing group data and data from Project Budburst using a statistical test, and developing and interpreting graphs

3) Presenting a group poster, and writing an individual scientific paper

4) Connect work to climate change

#### Choosing a citizen science project

- Project that can work across semesters with large number of students (360 students per semester)
- Has to be completed on campus

# **Curriculum Development**

• Developed and validated rubrics, student documents, minimum requirements for projects • TA documents and training (Semester & Weekly)

# Pathway of Growth during Ecology Section

#### **First Step:** Students determ

- Research quest
- Choose Pheno
- Tree species to
- Abiotic Condită (Temperature, r etc)

Done individua then as a group

Fall

# **Foundational Subjects (Weekly Subjects)** Citizen Science, Ecology, Tree Identification, Climate Change/Weather, Statistics, Learning to use R, Writing Scientific Papers, Designing Scientific Poster

**Teaching Assistant Ch** • Not expert in statistics/ti -Detailed TA documents Managing students and

- Allow TAs to form grou • First time teaching as TA

- Support system from ex and lab managers

 Maintaining balance bet and graduate school - Realistic timeframe for

grading assignments
